Timber structures — Solid timber finger-jointing — Production requirements

1. Scope

This International Standard specifies requirements for bonded finger joints and minimum requirements for the manufacture of cut, interlocking, bonded finger joints in structural timber members.

Although most finger joints are produced in coniferous species, this International Standard also applies to broad leaved species where information is available to enable them to be satisfactorily bonded.

It does not cover impressed (die-formed) joints. In the case of glued laminated timber, it applies only to individual laminations. Large finger joints in glued laminated timber are not covered by this International Standard.

(Due to copyright issues, ZBS circulates the title and scope of the standard only, for full documents please visit ZBS office - Department of standardization).
